LAPLAND SPRING

NATURAL WATER FROM FINLAND

Water is the foundation of life. A healthy diet includes 2-3 liters of water daily. Despite the fact that 70 % of the Earth's surface is water, many regions suffer under a serious shortage of potable water.

Access to pure drinking water is one of the most significant living standards. Clean potable water can be sourced from nature or produced in water treatment facilities where chemicals are used to make it safe for drinking.

According to the UNESCO water research report Finland was ranked No. 1 among countries with the best potable water resources. Finland has obtained this high ranking because the country has still many spots of pristine nature and can enjoy abundant rainfall.

However, the major part of water consumed in Finland is made drinkable by using chemicals. It is always important to know the origin and composition of the water You drink.

LAPLAND SPRING

Lapland Spring water rises naturally to our factory, filtered by layers of ancient sand which were formed during the last Ice Age more than 10 000 years ago.

Water is pumped straight from the spring to our factory. Water is lead through 0.2-micron filters (thickness of human hair is about 30-200 microns) into glass-bottles.

In our water we preserve the life of water, not killing it by chemicals. The best proof of Lapland Spring water is that we change our filters only once a year. Mother Nature filters Lapland Spring water crystal clear. Filters are there just for the sake of safety.

Environment

We strive to be a responsible actor for the benefit of our environment. We make use of solar energy in our production. Our own solar energy system can satisfy the major part of our electricity needs.

Composition of Lapland Spring natural spring water

The natural spring water bottled by Lapland Spring is derived from our spring, located only some hundred meters from our bottling plant.

The water is pumped from the spring to our plant. We provide regular inspection of our water composition. Some of the analyses are made by our local municipal authorities. The test results variations have been very small through the years.

ORGANOLEPTICS

Appearance

Lapland Spring when poured into the glass is distinguished by its fine cloud of miniscule oxygen bubbles, which slowly migrate to the surface and then disappear without a trace. The spring water is then crystal clear with a fine silvery surface.

Aroma

Clean, pure nose, possessing a neutral character.

Taste

Captivatingly fresh first impression on the palate, a mild and soft sensation then spreads throughout the mouth. A pleasantly fine and light mellifluousness immediately develops on the tongue, gently enveloping the palate. A subtle sweetness develops towards the second stage on the palate, which lasts longer and then fades away towards the aftertaste. What remains is a pleasantly silky soft impression.

A spring water which encourages you to keep drinking thanks to its lightness and freshness!

PAIRING RECOMMENDATIONS

Due to its mild mineral content and its associated harmonious character, Lapland Spring can be served with numerous drinks and dishes.

Complement to wine

Lapland Spring's balanced organo-leptic characteristics, means that the bouquet of the wine can come into its own. Lapland Spring can partner wine with vibrant acidity very well, as the latter's freshness is additionally underscored by this spring water. It is also a great choice as an accompaniment to full bodied, characterful red wine – even oak cask aged - and can elegantly support the individual tasting experience.

Partnering coffee

Its balance and softness, conveying charm makes Lapland Spring a good accompaniment to coffees with aromas such as high-roast espresso. It also goes well with lighter coffee combinations with milk or cream or hot chocolate.

Suitability for tea

Lapland Spring is also well-suited to combining with spicy and off-dry teas. Light mineralisation makes this spring water the ideal choice in the preparation of exquisite teas. Whether for strong or delicately dry black teas or for distinctive green teas, Lapland Spring elicits every sensory secret from the tea. Tea retains its bright, clear colour and its aromas can develop fully.

Food-pairing

Lapland Spring is generally an excellent culinary accompaniment as it unobtrusively sets the scene for food. It perfectly refreshes the palate with everything from lightly spiced to hearty dishes. It partners meat dishes such as grilled rack of lamb just as perfectly as fried or smoked fish. Lapland Spring also harmonises well with creamy desserts such as chocolate mousse. Its fresh and delicate character makes it a real treat for the palate and brings out the pleasantly bitter note of the chocolate.
